

Our customer, a world-wide leading biopharmaceutical company, developed a new drug for the treatment of pulmonary Hypertension. The **alabus registry** platform ensures the long-term safety profile and supports the specialists and patients by monitoring the treatment processes. The registries were established to collect information about the disease evolution, as well as the application and effects of medications.

The **alabus registry** platform allows the coordination and considerable optimization of the collection and management of the case information and its related activities in multiple centers. The joint development focused on the flexibility and extensibility of the solution.

Vision

Easy and efficiently useable registry to observe **and** to improve the treatment and patient survival, and a platform for best practice information and support for studies.

Goals

- Collection of key information on specific diseases and treatments
- Optimize ease of use of information system for specialist with no compromise in security and data ownership
- Support the positive relationship with the sponsor
- Support specific studies and provide flexibility for extension
- Improve information sharing/pooling between various subject areas

Project Management

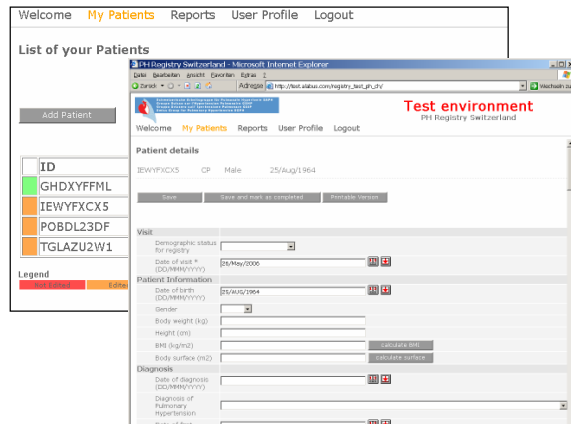

The **alabus** project approach allowed the development of a creative dialog between medical specialists and technical partner.

- Working groups with dedicated medical specialists to define and quality approve the case registration forms
- Workshops and telephone conferences with **alabus registry** product based prototypes
- Involvement of medical specialist during the project – sponsor as coordinator of refinement process
- Working group recognized on a national level

Solution

Clear and self-describing intranet-based case registration and management platform

- Simple
- Flexible and easily extensible, secure Internet-based solution based on standard **alabus registry** product
- Question/answer or question/parameter pairs that are grouped into forms
- Association of specific cases to studies with additional questions reduces complexity
- Reports/data export (PDF, Excel), timeseries and formatted visit forms

Benefit

- Continuous dialog between industry leading sponsor and specialist community
- Common information base to track safety of medication and improve treatment (also through studies)

Produkte der **alabus** realisieren individualisierte Standardlösungen im Prozess Management für zukunftsgestaltende Unternehmen aus der Schweiz mit internationaler Ausrichtung.
