alabus process share

_ alabus process share architecture and benefits

_ Management of compliance and organisations

Cost efficiency

All business functionality is configured in the existing business process modules. This reduces initial and maintenance costs massively.

Simplicity

The chosen approach "always alike" helps to reduce implementation and training efforts significantly.

Rapid Prototyping

The model-based architecture cuts time to configure & develop customer-specific elements, and increases robustness.

Integration

Through the consistent use of open standards, a simple and efficient integration into the prevailing IT-infrastructure is given.

X-organisation

alabus process share has built-in multi-organisation capability, is multilingual and supports the necessary local requirements.

Compliance

The security and access model is configured in one place and is made available to the different channels (portals), resulting in an active compliance.
